Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Discovery & Onboarding	Stage 2: Blog Creation & Management	Stage 3: AI-Assisted Content
Actions <i>What does the customer do?</i>	- Registers an account with name, email, password - Logs in and receives a JWT token - Opens their authenticated profile	- Creates a new blog post (title, content, category) - Views all blogs / a single blog by ID - Updates or deletes their own blog	- Submits a topic and category for AI generation - Reviews the Gemini-generated blog draft - Submits existing content for AI summarization
Touchpoint <i>What part of the service do they interact with?</i>	- POST /api/auth/register - POST /api/auth/login - GET /api/auth/profile	- POST /api/blogs, GET /api/blogs - GET /api/blogs/:id - PUT /api/blogs/:id, DELETE /api/blogs/:id	- POST /api/ai/generate-blog - POST /api/ai/summarize - Gemini AI service response
Customer Thought <i>What is the customer thinking?</i>	"Is sign-up quick and secure?" "Will my password be safe?" "Did I receive a valid token?"	"Can I manage my posts easily?" "Will only I be able to edit my own blog?" "Is my content saved correctly?"	"Can AI really save me writing time?" "Is the generated content relevant?" "Is the summary accurate?"
Customer Feeling <i>What is the customer feeling?</i>	Reassured by clear validation messages and a fast, hashed-password registration flow.	Confident and in control, since JWT-protected routes ensure only the author can modify a blog.	Impressed and delighted by how quickly Gemini AI produces usable draft content and summaries.
Process Ownership <i>Who is in the lead on this?</i>	authController.js & authMiddleware.js (Backend Team)	blogController.js & PostgreSQL schema (Backend Team)	aiController.js & geminiService.js (AI Integration Team)
Opportunities <i>How can we improve this stage?</i>	- Add email verification - Add password-strength meter - Add refresh tokens	- Add pagination for blog lists - Add rich-text/markdown editor - Add blog drafts / autosave	- Let users pick AI tone/length - Cache repeated summaries - Show generation progress indicator
