Project Executable Files

This section contains all executable and deployable files for the AI BlogNest project. All files are organized, named, and ready for upload to the specified submission platform so the evaluator can run or deploy the solution using the instructions below.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes (package.json)
4	Database schema / seed files (if applicable)	Yes (users & blogs table SQL)
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA (local demo)
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	No
9	Test files and test results	Yes (Postman collection)
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

AI BlogNest - package.json - package-lock.json .env - src - config - db.js - controllers - aiController.js - authController.js - blogController.js - middleware - authMiddleware.js - errorMiddleware.js - routes - aiRoutes.js - authRoutes.js - blogRoutes.js - services - geminiService.js - app.js - server.js
--

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	[Not hosted — run locally at http://localhost:5000]
Login Credentials (Demo)	Email: testuser@gmail.com Password: test123456
Platform / Hosting Provider	Local (can be deployed to Render / Railway / AWS)
Repository Link	[Paste your GitHub repository link for AI BlogNest here]
Demo Video Link	[Paste demo video link here]

Step 4: Run Instructions

Pre-requisites: Node.js v16+, npm, PostgreSQL 13+, a Google Gemini API key.

Step 1: Clone the repository: `git clone <url>`
Step 2: Install dependencies: `npm install`
Step 3: Configure environment: copy `.env.example` to `.env` and set `DATABASE_URL`, `JWT_SECRET`, `GEMINI_API_KEY`
Step 4: Create the PostgreSQL database "blognest" and run the users/blogs `CREATE TABLE` statements
Step 5: Start the application: `npm run dev`
Step 6: Open Postman or a browser at `http://localhost:5000`

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No role-based access control (Admin/Editor/Reader)	Planned for a future release; currently single "registered user" role
2	Blog listing is not paginated	Acceptable for current dataset size; pagination planned
3	AI generation latency depends on Gemini API response time	Frontend/clients should show a loading state; typically 3-5 seconds
